COUNTRY		Registered Horse	
II. Health information	II.a. Certificate reference number	II.b.	
Part II: Certification	II. Animal health attestation		
	I, the undersigned official veterinarian, hereby certify that the registered horse described above meets the following requirements:		
	II.1	it is a registered horse in accordance with the definition provided for in Article 2(c) of Council Directive 2009/156/EC which has been temporarily, for a period of less than 90 days, admitted into the European Union from Canada (see CVED [insert CVED number] attached) and has been moved during this period exclusively within the European Union from one Member State to another in accordance with Union legislation adopted pursuant to Article 19(b) of Council Directive 2009/156/EC;	
	II.2.	it has been inspected on [insert dd/mm/yyyy] within 72 hours prior to loading for return to Canada by a veterinarian officially recognised by the competent authority of the EU Member State described in Box I.7 and found to be free of ectoparasites and clinical evidence of infectious or contagious diseases of equidae and, as far as can be determined, exposure thereto;	
	II.3	it returns to Canada from a Member State or part of the territory of a Member State of the European Union:	
	II.3.1	in which African horse sickness, Japanese-encephalitis, Venezuelan equine encephalomyelitis, equine infectious anaemia, glanders (<i>Burkholderia mallei</i>), dourine (<i>Trypanosoma equiperdum</i>) are compulsorily notifiable diseases;	
	II.3.2	that is considered by the CFIA to be free of African horse sickness, Japanese encephalitis and Venezuelan equine encephalomyelitis and in which no restrictive measures are in place on these diseases by the EU or the Member State described in Box I.7., and the Member State described in Box I.7. is in full compliance with all relevant EU legislation for these diseases;	
	II.3.3	that has been free from dourine and glanders during the 6 months immediately preceding export to Canada and in which no restrictive measures are in place on these diseases by the EU or the Member State described in Box I.7., and the Member State described in Box I.7. is in full compliance with all relevant EU legislation for these diseases;	
	II.4	during its stay in the European Union it has not been in any country or zone in which Venezuelan equine encephalomyelitis has occurred in the past 24 months, it has not been vaccinated against Venezuelan equine encephalomyelitis within 60 days immediately preceding its return to Canada, and the Member State described in Box I.7. is in full compliance with all relevant EU legislation for this disease	
	II.5	during its stay in the European Union it has not been in contact with equidae (including imported equidae) that have been in an area where restrictive measures are in place on African horse sickness or in a country or zone where African horse sickness has been diagnosed in the past 60 days, and it has not been vaccinated against African horse sickness within 60 days immediately preceding its return to Canada, and the Member State described in Box I.7. is in full compliance with all relevant EU legislation for this disease;	
II.6	during its stay in the European Union it has not been on any premises subject to restrictive measures for glanders or dourine and it has not had contact with equidae (including imported horses) that have been in an area where restrictive measures are in place on dourine and glanders during the past 6 months immediately preceding its return to Canada, and the Member State described in Box I.7. is in full compliance with all relevant EU legislation for these diseases;		
II.7	during its stay in the European Union it has not been on any premises where equine infectious anaemia has occurred nor has this disease occurred on any adjoining premises during 60 days immediately preceding its return to Canada;		

- II.8 according to the declaration by the owner or his representative responsible for the horse, during its stay in the European Union it has not been on any premises where
- II.8.1 equine piroplasmosis (*Theileria equi* and *Babesia caballi*) is known to have occurred during 60 days immediately preceding its return to Canada, and it was maintained free from ticks, when necessary by preventive treatment, during the thirty (30) days immediately preceding its return to Canada;
- II.8.2 contagious equine metritis (*Taylorella equigenitalis*) is known to have occurred during the 60 days immediately preceding its return to Canada or where breeding activities were carried out, and has not been used for breeding purposes nor had its urogenital tract been catheterized or examined;
- II.9 as far as can be ascertained, during its stay in the European Union it has not come into contact with any equidae, products derived from equidae or equipment used in contact with equidae of a lesser zoosanitary health status and arrangements are made that such contacts will be prevented during transportation to the port of exportation and loading onto the international transport carrier and the carrier has been instructed to maintain this status throughout transport to Canada;
- II.10 it has been treated before and at the time of loading in accordance with the relevant provisions of Regulation (EC) No 1/2005, in particular as regards watering and feeding, and at the moment of inspection it appeared fit for the intended transport.

Stamp:

The signature and the stamp must be in a different colour to that of the printing.

Notes

Part I:

- Box no. I.11: Indicate the premises of export: .
- Box no. I.28: Identification system: insert "microchip"
Identification number: shall correspond to the alpha-numeric code of the microchip displayed by the appropriate reading device.
According to the import rules of Canada, the animal must already be identified with a microchip, before export to the EU. The number of the microchip must be recorded on the accompanying return health certificate. For the verification of the identity of the animal it is mandatory to make available at the point of entry into Canada a reading device capable of reading and displaying the alpha-numeric code inserted in Box I.28.

Part II:

Post-Entry Import Conditions:

- The horse(s) being presented for re-entry into Canada must be quarantined for the period of time necessary to complete the tests required to meet the import conditions.
- They must be imported into Canada through a minimum-level quarantine facility, approved by the CFIA for that purpose. The import quarantine facility must have been previously approved for use as a minimum security quarantine facility by a veterinary inspector designated under the Health of Animals Act. The facility evaluation shall include the following: location, fencing, physical structure, lighting, water supply, waste disposal, vector and pest control, movement of people, security, and cleaning and disinfection protocols. A report that the facility has been approved must have been issued by the CFIA. No animal may be moved from its respective quarantine premises until duly discharged by an inspector designated under the Health of Animals Act. On completion of quarantine with negative results on all tests, the animals will be released to the importer and/or owner.
- During post-entry quarantine in Canada, the horse(s) must be tested for equine piroplasmosis using an indirect fluorescent antibody test or, where applicable, an alternate test for equine piroplasmosis that is acceptable to the CFIA, with negative results.
- During post-entry quarantine in Canada, the horses must be tested for equine infectious anaemia using an ELISA test or, where applicable, an alternate test for equine infectious anaemia that is acceptable to the CFIA, with negative results.
