Approval number of semen collection centre
--

I. Identification of semen consignment

Donor bull breed Hb No.	Date of birth	Date of entry into centre	No. of doses	Date of collection	Identification of straws

II. Health certification

1. The undersigned veterinarian hereby certify that

- a) the semen referred to above was collected at a semen collection centre approved by the Swedish Board of Agriculture (SBA), which is under the control and supervision of a veterinarian approved by the state veterinary authority;
 - b) no outbreaks of Foot and Mouth Disease or Vesicular Stomatitis have occurred at, or within twenty (20) kilometres of the above mentioned semen collection centre during the twelve (12) months immediately preceding the date on which the semen for export was collected;
 - c) the animals on the semen collection centre have not been vaccinated against Foot and Mouth Disease within the three (3) months preceding the date of collection of the semen.
 - d) the donors bulls
 - I. have been continuously resident at the Semen Collection Centre concerned, or at other such approved Semen Collection Centre for a period of at least three months prior to collection of the semen for export to the Republic of South Africa, and in that time have not been used for natural mating;
 - II. were at the time of collection clinically healthy and clinically free from diseases which are transmitted via the semen including Listeriosis, Mucosal Disease, Johne's disease and pyogenic infections;
 - III. have been tested for Tuberculosis with negative results within the twelve (12) months preceding the collection of the semen to be exported;
 - IV. have during the isolation period before entering the semen collection centre, been tested with negative result for Trichomonas infection (culture test on a sample from a sheathwashing).
 - V. showed no Campylobacter fetus infection on cultural examination on one sheathwashing taken from them during the twelve (12) months immediately preceding date of collection;
 - VI. have been tested serologically for Leptospira (serotypes: Canicola, Grippotyphosa, Hardjo, Icterohaemorrhagiae, Pomona) with negative results within twelve (12) months preceding collection of the semen;
 - VII. have been tested serologically for Brucellosis with negative results within the twelve (12) months preceding the collection of the semen;
 - VIII. originate from herds where no clinical, cultural or pathological evidence of Johne's Disease occurred in the herd of origin for the 3-year period before the bulls entered at the Semen Collection Centre.
 - e) representative samples of blood serum were tested serologically and were negative on IBR/IPV virus.
 - f) within the previous three (3) months a blood sample taken from each donor bull was tested by ELISA test for Enzootic Bovine Leucosis with negative results.
 - g) the semen collection centre is declared free from Bovine Virus Diarrhoea and, during the isolation period before entering the centre, serum from all bulls were examined for Bovine Virus Diarrhoea virus by tissue culture from bovine turbinate cells with negative results.
2. *It is hereby certified that the semen intended for exportation to the Republic of South Africa*
- has after collection been stored in a separate container in a place approved by the Swedish authorities.
 - has been packed in a disinfected container and that the fresh liquid nitrogen has been used.
